

EXPANDING HEALTH COVERAGE WITH FEDERAL FUNDS

WILL CREATE ECONOMY-BOOSTING JOBS IN IDAHO

February 2014

INTRODUCTION

Under the provisions of the Affordable Care Act, states have the option to extend health coverage to more residents by expanding Medicaid eligibility to cover people with incomes up to 138 percent of the federal poverty level, with the costs of this expansion covered mostly by federal funding (100 percent covered by federal funding in 2014-2016, then phasing down gradually to 90 percent federal funding in 2020 and future years).¹ Whether to accept these federal funds to expand health coverage or not is one of the key decisions facing the Idaho Legislature in 2014.

If Idaho accepts the federal funds to expand coverage, an estimated 88,000 Idaho residents will gain health insurance coverage through the expansion.² In addition to expanding health coverage and reducing Idaho's uninsured rate, adoption of this coverage expansion will also create jobs and boost economic activity at the state level.

What kinds of jobs will be created in Idaho as a result of this health coverage expansion? Will the new jobs be good-paying jobs that can support families and a growing economy? This report investigates these questions.

**COVERAGE EXPANSION WILL CREATE JOBS
– ACROSS IDAHO’S ECONOMY BUT
MOSTLY IN HEALTH CARE**

Adoption of the health coverage expansion will trigger an influx of federal dollars into Idaho, with a significant resulting impact on job creation and economic activity. While the new jobs created as a result of Medicaid expansion will include jobs in industries all across the state’s economy (because of indirect and induced economic impacts of new health care spending), a majority of the new jobs will be concentrated in the state’s health care industry.

According to an analysis by University of Idaho economist Steven Peterson, if Idaho adopts the health coverage expansion in 2014, the new spending on health care services and its positive ripple effects will create 16,337 jobs in the state and increase total compensation by \$567 million (in constant 2012 dollars) in 2024.

An estimated 11,825 of these jobs and \$444 million in total compensation (in 2012 dollars) will be in the state’s health care industry. The other 4,512 jobs will be spread across a range of industries, including 2,314 in business services, 810 in trade, and 554 in lodging, food, and drink.

The table below provides a summary of the jobs and total compensation associated with accepting federal funds to expand Medicaid in Idaho in 2024 (ten year mark), by industry.

**JOBS AND TOTAL COMPENSATION ASSOCIATED
WITH ACCEPTING FEDERAL FUNDS TO EXPAND
MEDICAID IN IDAHO (2024)**

INDUSTRY	JOBS	TOTAL COMPENSATION (IN 2012 DOLLARS)
HEALTH CARE	11,825	\$443,514,415
BUSINESS SERVICES	2,314	\$60,038,503
TRADE	810	\$26,616,693
LODGING, FOOD & DRINK	554	\$8,596,877
SOCIAL SERVICES, ART & RECREATION	348	\$6,834,064
TRANSPORTATION & COMMUNICATION	199	\$7,643,753
MANUFACTURING	105	\$4,841,129
GOVERNMENT	61	\$4,038,104
AGRICULTURE & AG SERVICES	60	\$1,459,772
CONSTRUCTION	38	\$1,534,740
MINING & UTILITIES	23	\$1,654,355
TOTAL	16,337	\$566,772,404

POLICYMAKING SHOULD DISTINGUISH BETWEEN ECONOMY-BOOSTING JOBS AND ECONOMY-DRAINING JOBS

While policymakers often rely on job creation forecasts to assess different policy options, these forecasts often fail to provide an analysis of the quality and pay levels of the forecasted new jobs. This analysis is important because the quality and pay levels of new jobs have widespread ramifications at both micro- and macro-economic levels.

For example, a policy that produces 100 new jobs with average wages of \$25 an hour and a policy that produces 100 new jobs with average wages of \$10 an hour will have markedly different overall impacts, not only on households but also on local economies (through different consumer spending impacts) and on the state budget (through different tax revenue and public assistance spending impacts). This is the distinction between high-wage economy-boosting jobs and low-wage economy-draining jobs.

Given these ramifications, as Idaho policymakers consider the decision to accept or reject the federal funding to expand health coverage, it is important to ask not only how many net new jobs will be created, but also whether those jobs will be good-paying jobs that can support families and strengthen the economy.

ECONOMY-BOOSTING VS ECONOMY-DRAINING JOBS

Economy-boosting jobs are jobs that allow workers to earn enough to cover the basics, putting money in people's pockets to spend in local businesses, expanding local purchasing power, and boosting the economy.

Economy-draining jobs are jobs that don't allow workers to earn enough to make ends meet, draining local purchasing power, increasing public assistance costs, and making the economy stall.

WHAT IS A LIVING WAGE IN IDAHO, AND HOW MANY JOB OPENINGS PAY LIVING WAGES?

A living wage is a wage that allows an individual or family to cover the basic costs of living, including food, housing, transportation, child care, and health care. The report *“America’s Changing Economy: Searching for Work that Pays in the New*

Low-Wage Job Market,” the December 2013 installment of the Alliance for a Just Society’s annual Job Gap Study, calculated living wage levels for different household configurations in Idaho. The table below summarizes the 2013 Job Gap Study’s findings for living wage levels in Idaho for three household types: a single adult, one adult with one child, and two adults (both working) with two children.

IDAHO LIVING WAGE LEVELS (2013 JOB GAP STUDY)	Single adult	Single adult with one child	Two adults (both working) with two children
Gross monthly income needed	\$2,511	\$3,397	\$6,132 (combined)
Gross annual income needed	\$30,135	\$40,760	\$73,588 (combined)
LIVING WAGE (HOURLY)	\$14.49	\$19.60	\$17.69 (for each worker)

Source: 2013 Job Gap Study, http://jobgap2013.files.wordpress.com/2013/12/id_2013-job-gap_final.pdf

In addition to calculating living wage levels, the Job Gap Study examined projections for job openings by occupational category and median wage level to determine what share of projected job openings in Idaho pay a living wage for each household structure, and how many job seekers there are for each job opening that pays a living wage – the “job gap.”³ Some of the key findings were:

- For a single adult, with a living wage level of \$14.49 an hour, 44 percent of job openings in Idaho had median wages at or above the living wage level. There were 10 job seekers for each job opening at or above this living wage level.
- For a single adult with one child, with a living wage level of \$19.60 an hour, 23 percent of job openings in Idaho had median wages at or above the living wage level. There were 19 job seekers for each job opening at or above this living wage level.
- For a household with two working adults and two children, with a living wage level of \$17.69 an hour per adult, 30 percent of job openings in Idaho had median wages at or above the living wage level. There were 15 job seekers for each job opening at or above this living wage level.

HEALTH CARE JOBS ARE GOOD-PAYING JOBS IN IDAHO

How will the jobs created by Medicaid expansion, focused predominantly in the health care field, compare to Idaho’s living wage thresholds, and to the economy-wide projections of job openings and wage levels in Idaho?

A review of Occupational Employment Statistics (OES) data from the Idaho Department of Labor’s Labor Market Information website shows that jobs in Idaho’s health care industry tend to be good-paying jobs – both in relation to the living wage levels and in relation to median wage levels across Idaho’s economy.

Health care jobs are grouped into two sets of codes in the Occupational Employment Statistics data sets: one set of occupational codes for “Healthcare Practitioners and Technical Occupations,” and another set of occupational codes for “Healthcare Support Occupations.” The first set includes occupations such as physicians, dentists, optometrists, nurses, physical therapists,

pharmacy technicians, dental hygienists, paramedics, and diagnostic medical sonographers. The second set includes occupations such as home health aides, medical assistants, dental assistants, psychiatric aides, and medical transcriptionists.

Looking at job openings forecast for the Healthcare Practitioners and Technical Occupations group, where almost two-thirds of total projected openings for Idaho’s health care industry are found, 88 percent pay median wages above a living wage for a single individual. Seventy-three percent pay above a living wage for a household with one adult and one child. And 84 percent pay above a living wage for a household with two working adults and two children.

Combining the data for Healthcare Practitioners and Technical Occupations with the data for Healthcare Support Occupations to produce an overall picture of the state’s health care industry, 59 percent of projected job openings pay median wages above a living wage for a

HOUSEHOLD STRUCTURE	LIVING WAGE (HOURLY)	SHARE OF PROJECTED JOB OPENINGS IN IDAHO WITH MEDIAN WAGES ABOVE LIVING WAGE LEVELS		
		Healthcare Practitioners & Technical Jobs	All Health Care Jobs	Economy-Wide in Idaho
Single adult	\$14.49	88%	59%	44%
Single adult with one child	\$19.60	73%	48%	23%
Two adults (both working) with two children	\$17.69 (per worker)	84%	55%	30%

single individual. Forty-eight percent pay above a living wage for a household with one adult and one child. And 55 percent pay above a living wage for a household with two working adults and two children.

Comparing the health industry numbers to the figures for the state economy overall underscores that health care jobs are comparatively better-paying jobs in Idaho. For example:

- For a single adult household, while less than half of all projected job openings pay median wages above a living wage, three out of five health care job openings and close to nine out of ten health practitioner and technical job openings do.
- For a household with two working adults and two children, while only three out of ten projected job openings economy-wide pay median wages above a living wage, more than half of health care job openings and more than eight out of ten health practitioner and technical job openings do.

CONCLUSION: HEALTH COVERAGE EXPANSION WILL CREATE ECONOMY-BOOSTING JOBS IN IDAHO

While much of the debate over Medicaid expansion in Idaho has focused on the health insurance coverage implications and direct budgetary impacts for the state, it is also important to consider the job creation and broader economic impact ramifications of the expansion decision. Informed policymaking should include consideration of the quality and pay levels of the jobs that would be created through this coverage expansion, and whether these jobs will be economy-boosting jobs or economy-draining jobs.

With a high proportion of new jobs created through the expansion in the health care sector and wage and job projection data showing that jobs in Idaho's health care industry tend to be higher-paying, living wage jobs, this analysis finds that Medicaid expansion will support economy-boosting jobs in Idaho.

Idaho faces both a gap in affordable health coverage and a gap in living wage jobs. Accepting the federal funds to expand health coverage is a policy prescription that has the potential to help address both of these challenges. The recommendations below are designed to help maximize the potential benefits of expanding health coverage in Idaho.

RECOMMENDATIONS

- **Adopt a Medicaid expansion plan in 2014, with target implementation date as soon as possible.** Delaying the decision to accept the federal funds for coverage expansion not only leaves tens of thousands of uninsured Idaho residents who could receive health coverage through the expansion in limbo; it also puts on hold the living wage job creation and economy-boosting potential of Medicaid expansion at a time when more living wage jobs are sorely needed.
- **Avoid conditions that would require approval of a federal waiver prior to implementation of the expansion.** Going through the federal waiver process to seek approval for experimental program redesign provisions could significantly slow down the timeline for implementing Medicaid expansion. Idaho has already fallen behind other states that implemented the expansion on January 1, 2014. The most efficient way to catch up will be to adopt a clean expansion plan that does not require a federal waiver.
- **Invest in health workforce development strategies that expand opportunities for people of color and low-income communities.** The new job creation resulting from Medicaid expansion is an opportunity to strengthen racial and

ethnic diversity in the state's health workforce and expand opportunities for people of color. A recent report from the Joint Center for Political and Economic Studies recommends strategies that include: establish "health care career academies" at high schools that serve students of color and lower-income students, strengthen funding for community colleges' health care occupation programs, and support on-the-job training initiatives and "career ladder" strategies that help people of color advance in the health fields.⁴

- **Strengthen cultural competency in the state's health workforce.** As new populations gain health coverage through the expansion, the state's success in translating expanded coverage into better health outcomes (and lower future costs) will depend in part on the health workforce's ability to meet the needs of patients with different racial, ethnic, and cultural backgrounds. Expanding diversity of the health workforce will help in this endeavor. In addition, strategies should be pursued to ensure access to interpretation and translation services for non-English speakers, and health care providers should be encouraged to sponsor or participate in cultural competency training programs.
